Chris,

As per our discussions, your course of action as outlined below is acceptable to me.
I agree ... an NCR must be raised to prevent this from happening in the future.

Subject: NCR D350-748-141/-241

David,

RE: The xtube cuff holes on several D350-748-141/-241 were misaligned by as much as 0.040". The misalignment is between the hole pattern on the inboard and outboard side of the cuffs, ie. The dimension from the bottom of the xtube to the center hole (0.500-0.780 on dwg) is different from inboard to outboard side.

We opened the holes on the worst-case xtube with a q-drill to 0.332 diam (dwg is p-drill or 0.323). The tubes could be assembled in a complete gear. He had to tap a few bolts through, but not nothing with any large amount of effort. We will assemble each affected tube and verify them.

The non-conforming xtube is the aft xtube in the attached picture. As this is an unusual deviation, we thought it best to ask for your opinion. Is this acceptable? An NCR has been initiated to figure out why this happened.

Thanks,
-Chris
